

OPERATOR'S MANUAL

650483-X

SPECIFICATIONS, SERVICE KITS, GENERAL INFORMATION, TROUBLESHOOTING

INCLUDE MANUALS: 66300-X LOWER PUMP END (PN 97999-646) &
S-632 GENERAL INFORMATION MANUAL (PN 97999-624)

RELEASED: 1-5-96
REVISED: 6-1-10
(REV. D)

4-1/4" AIR MOTOR
11:1 RATIO
6" STROKE

650483-XXX TWO BALL PUMP SERIES 300 SERIES STAINLESS STEEL

**READ THIS MANUAL CAREFULLY BEFORE INSTALLING,
OPERATING OR SERVICING THIS EQUIPMENT.**

It is the responsibility of the employer to place this information in the hands of the operator. Keep for future reference.

SERVICE KITS

- Use only genuine ARO® replacement parts to assure compatible pressure rating and longest service life.
- **61268 for repair of Air Motor section.**
Service Note: The Air Motor Service / Parts Manual is not shipped with each Service Kit. If this Service / Parts Information is needed, request the Air Motor Operator's Manual from ARO. (Manual 6544X-X, PN 97999-64).
- **637305-X43 for repair of Lower Pump section.**
Refer to the chart on page 2 for description of -XXX options.

SPECIFICATIONS

Model Series (Refer to option chart)	650483-XXX
Type	Air Operated, Two Ball
Ratio	11:1
Air Motor	65465-B
Motor Repair Kit	61268
Motor Diameter	4-1/4" (10.8 cm)
Stroke	6"
Air Inlet (female)	1/2 - 14 N.P.T.F. - 1
Air Exhaust (female)	1-1/4 - 11-1/2 N.P.T.F. - 1
Lower Pump End Series	66300-XXX
Lower Pump Repair Kit	637305-X43
Material Inlet (female)	1 - 11-1/2 N.P.T.F. - 1 &
(male)	2 - 11-1/2 P.T.F. (short)
Material Outlet (female)	1 - 11-1/2 N.P.T.F. - 1
Weight	42.9 lbs (19.5 kgs)

PERFORMANCE

Air Inlet Pressure Range	30 - 150 p.s.i. (2 - 10.3 bar)
Fluid Pressure Range	330 - 1650 p.s.i. (23 - 114 bar)
Maximum Rec'd Cycles / Minute	60
Displacement In³ Per Cycle	14.5
Volume / Cycle	8 oz. (238 ml)
Cycles Per Gallon	15.9
Flow @ 60 Cycles / Minute	3.7 g.p.m. (14.0 l.p.m.)
Noise Level @ 60 p.s.i. - 40 c.p.m.	81.8 db(A) *

* The pump sound pressure level has been updated to an Equivalent Continuous Sound Level (L_{Aeq}) to meet the intent of ANSI S1. 13-1971, CAGI-PNEUROPS 5.1 using four microphone locations.

PUMP DATA

IMPORTANT

This is one of the four documents which support the pump. Replacement copies of these forms are available upon request.

- 650483-X MODEL OPERATOR'S MANUAL
- GENERAL INFORMATION - INDUSTRIAL PISTON PUMPS
- 66300-X LOWER PUMP END OPERATOR'S MANUAL
- 6544X-X AIR MOTOR OPERATOR'S MANUAL

PUMP OPTION DESCRIPTION CHART

PACKING MATERIAL

(PACKINGS ARE UPPER AND LOWER UNLESS NOTED)

3 Glass Filled PTFE	P UHMW-PE / PTFE staggered (upper)
C UHMW-PE	UHMW-PE (lower)
G UHMW-PE / Leather staggered	R PTFE / UHMW-PE staggered (upper)
	PTFE (lower)

SPRING ARRANGEMENT

4 Multiple Wave Spring w/ 316 Stainless Steel Balls
7 Multiple Wave Spring w/ 440 Stainless Steel Balls

PLUNGER TYPE

3 Hardened Stainless Steel w/ Hard Chrome Plating
B Hardened Stainless Steel w/ Ceramic Coating

GENERAL DESCRIPTION

⚠ WARNING HAZARDOUS PRESSURE. Do not exceed maximum operating pressure of 1650 p.s.i. (114 bar) at 150 p.s.i. (10.3 bar) inlet air pressure.

$$\text{PUMP RATIO X INLET PRESSURE TO PUMP MOTOR} = \text{MAXIMUM PUMP FLUID PRESSURE}$$

Pump ratio is an expression of the relationship between the pump motor area and the lower pump end area. EXAMPLE: When 150 p.s.i. (10.3 bar) inlet pressure is supplied to the motor of a 6:1 ratio pump it will develop a maximum of 750 p.s.i. (52 bar) fluid pressure (at no flow) - as the fluid control is opened, the flow rate will increase as the motor cycle rate increases to keep up with the demand.

⚠ WARNING Refer to general information sheet for additional safety precautions and important information.

- The Two-Ball pumps are primarily designed for the pumping of medium viscosity fluids, Stainless Steel construction offers compatibility with a wide range of fluids. The two-ball design provides better priming of the lower foot valve. The double acting feature is standard in all ARO industrial pumps, material is delivered to the pump discharge outlet on both the up and down stroke.
- The motor is connected to the lower pump end by a spacer section. This allows for lubrication of the upper packing gland and prevents motor contamination because of normal wear and eventual leakage through the material packing gland. Be sure the solvent cup is adequately filled with lubricant to protect the upper packings and insure longest service life.

TROUBLE SHOOTING

Pump problems can occur in either the Air Motor Section or the Lower Pump End Section, use these basic guidelines to help determine which section is affected.

If the pump will not cycle.

- Be certain to first check for non-pump problems including kinked, restrictive or plugged inlet / outlet hose or dispensing device. Depressurize the pump system and clean out any obstructions in the inlet / outlet material lines.
- Refer to the motor manual for trouble shooting if the pump does not cycle and / or air leaks from the air motor.

If the pump cycles but does not deliver material.

- Refer to the lower pump end manual for further trouble shooting.

PUMP CONNECTION - UPPER / LOWER

NOTE: All threads are right hand.

- Lay the pump assembly on a workbench.
- Remove the three nuts from the three spacer rods. (Fig. 1)
- Pull the air motor from the lower pump end until motor piston rod is in the "down" position and lower pump end rod is in "up" position.
- Using e-ring pliers, slide the retaining ring up far enough to allow the sleeve to move upward and release the two connectors. (Fig. 2)

REASSEMBLY

- Align the pump motor with the lower pump end.
- Install the two connectors and retain with the sleeve, slide the retaining ring back into position.
- Reinstall the spacer rods to the pump motor.
- Bring the motor and lower pump together and retain with the three nuts.
